

Discipline	CHEMISTRY							
Course Code	UK1DSCCHE1	UK1DSCCHE104						
Course Title	GENERAL INC	ORGANIC (	CHEMISTR	Y				
Type of Course	DSC							
Semester	1							
Academic Level	100 - 199				70			
Course Details	Credit	Credit Lecture Tutorial Practical Total Hours/Week						
		per week	per week	per week	·			
	4 3 hours - 2 hours 5							
Pre-requisites	1. Higher secondar	ry level scienc	e knowledge					
Course Summary	The course covers atomic structure, chemical bonding, co-ordination chemistry and secondary bond forces, analytical principles including volumetric analysis and Nuclear Chemistry. Students learn about quantum numbers, orbital concepts, electron configuration, bond energetics, molecular geometry, and fundamentals of analytical chemistry. They also gain a detailed understanding of the radioactivity and nuclear chemistry							

# **Detailed Syllabus:**

Module	Unit	Content	Hrs				
		GENERAL INORGANIC CHEMISTRY	75				
1	ATO	MIC STRUCTURE, CHEMICAL BONDING AND SECONDARY	21				
	BON	D FORCES					
	1 Atomic spectrum of hydrogen - different series, Rydberg equation.						
		Bohr theory – postulates – statement of Bohr energy equation – derivation					
		of spectral frequency from Bohr equation					
	2	Schrodinger wave equation (mention only, no derivation), concept of	2				
	4	orbitals. Quantum numbers and their significances					
	3	Orbital wise electron configuration, energy sequence rule – Pauli's principle,	3				
	1	Hund's rule, Stability of filled and half-filled orbitals.					
	4 Electronic configuration of lanthanides and actinides						
	5	Energetics of ionic bond formation – Born-Haber cycle. Fajan's rule.	3				
	6	Hybridisation and shape of molecules with examples – sp (BeCl <sub>2</sub> ), sp <sup>2</sup> (BF <sub>3</sub> ),	3				
		sp <sup>3</sup> (CH <sub>4</sub> ), sp <sup>3</sup> d (PCl <sub>5</sub> ), sp <sup>3</sup> d <sup>2</sup> (SF <sub>6</sub> ) and sp <sup>3</sup> d <sup>3</sup> (IF <sub>7</sub> )					
	7	VSEPR theory, regular and irregular geometry, H <sub>2</sub> O, NH <sub>3</sub> , XeF <sub>2</sub> , XeF <sub>4</sub> .	3				
		Hydrogen bond – inter and intra molecular – its consequences on boiling					
		point and volatility. Importance of hydrogen bonding in biomolecules –					
		Proteins and nucleic acids.					
	8	Ionic character of covalent bond – Polar and non-polar covalent compounds.	2				

9 Types of ligands, Werner's coordination theory, Valence bond theory of bonding in octahedral and tetrahedral complexes, Drawbacks of valence bond theory.  10 Crystal field theory of octahedral and tetrahedral complexes, examples – high and low spin complexes, magnetic properties, Application in qualitative and quantitative analysis  III ANALYTICAL PRINCIPLES  11 Principles of volumetric analysis – primary standard – standard solutions normality and molarity  12 Theory of acid-base titrations, permanganometric and dichrometric titrations, iodometry and complexometric titrations.  Theory of acid-base indicator – redox indicators  13 Principles of colorimetry – estimation of biomolecules aglucose and chlorophyll.  IV RADIOACTIVITY AND NUCLEAR CHEMISTRY  9 RADIOACTIVITY AND NUCLEAR CHEMISTRY  14 Radioactive decay series, Radioactive equilibrium, Average life, Half-life. Detection of radio activity-Geiger Muller Counter, Wilson cloud chamber. Units of radioactivity - Curie and Rutherford. Units of radiations.  15 Nuclear Chemistry - stability of nucleus, n/p ratio.  Artificial transmutation and radioactivity, mass defect, binding energy.  16 Applications of radio activity in medicine and agriculture.  Biological effects of radiation, pathological and genetic damage.  V VOLUMETRIC ANALYSIS  18 Section A: Volumetric Analysis (5 Experiments (double titration) from Section A are compulsory)  1. Preparation of standard solutions.  2. Neutrafization Titrations a. Strong acid – Strong base b. Strong acid – Strong base b. Strong acid – Strong base c. Weak acid – Strong base b. Strong acid – Strong base c. Weak acid – Strong	II	CO-C	ORDINATION CHEMISTRY	6
bond theory.   10   Crystal field theory of octahedral and tetrahedral complexes, examples – high and low spin complexes, magnetic properties, Application in qualitative and quantitative analysis   9		9		3
10   Crystal field theory of octahedral and tetrahedral complexes, examples – high and low spin complexes, magnetic properties, Application in qualitative and quantitative analysis   ANALYTICAL PRINCIPLES   9				
and low spin complexes, magnetic properties, Application in qualitative and quantitative analysis  III ANALYTICAL PRINCIPLES  11 Principles of volumetric analysis – primary standard – standard solutions normality and molarity  12 Theory of acid-base titrations, permanganometric and dichrometric titrations, iodometry and complexometric titrations.  Theory of acid-base indicator – redox indicators  13 Principles of colorimetry – estimation of biomolecules – glucose and chlorophyll.  IV RADIOACTIVITY AND NUCLEAR CHEMISTRY  9 Radioactive decay series, Radioactive equilibrium, Average life, Half-life.  Detection of radio activity-Geiger Muller Counter, Wilson cloud chamber. Units of radioactivity - Curie and Rutherford, Units of radiations.  15 Nuclear Chemistry – stability of nucleus, n'p ratio.  Artificial transmutation and radioactivity, mass defect, binding energy.  16 Applications of radio activity- in medicine and agriculture.  Biological effects of radiation, pathological and genetic damage.  V VOLUMETRIC ANALYSIS  18 Section A: Volumetric Analysis (5 Experiments (double titration) from Section A: a compulsory)  1. Preparation of standard solutions.  2. Neutralization Titrations  a. Strong acid – Strong base  b. Strong acid – Weak base  c. Weak acid – Strong base  3. Redox Titrations - Permanganometry  a. Estimation of Fe <sup>2+/r</sup> FeSO4.7H <sub>2</sub> O/Mohr's salt.  19 Section B (Open ended: Any 3 experiments are to be conducted - May be selected from the list or the teacher can add related experiments)  1. Dichrometry  2. Iodometry & Iodimetry  2. Iodometry & Iodimetry  3. Complexometry		10		2
Quantitative analysis   9		10		3
11				
11   Principles of volumetric analysis – primary standard – standard solutions normality and molarity   12   Theory of acid-base titrations, permanganometric and dichrometric fitrations, iodometry and complexometric titrations. Theory of acid-base indicator – redox indicators   13   Principles of colorimetry – estimation of biomolecules – glucose and chlorophyll.   14   Radioactive decay series, Radioactive equilibrium, Average life, Half-life. Detection of radio activity-Geiger Muller Counter, Wilson cloud chamber. Units of radioactivity – Curie and Rutherford, Units of radiations.   15   Nuclear Chemistry – stability of nucleus, n/p ratio. Artificial transmutation and radioactivity, mass defect, binding energy.   16   Applications of radio activity- in medicine and agriculture.   3   Biological effects of radiation, pathological and genetic damage.   30    18   Section A: Volumetric Analysis (5 Experiments (double titration) from Section A are compulsory)   1. Preparation of standard solutions.   2. Neutralization Titrations   a. Strong acid – Strong base   b. Strong acid – Strong base   b. Strong acid – Strong base   c. Weak acid – Strong base   c. Weak acid – Strong base   c. Weak acid – Strong base   c. Strong acid – Weak base   c. Weak acid – Strong base   c. Strong acid – Strong base   d. Estimation of oxalic acid.   b. Estimation of oxalic acid.   b. Estimation of oxalic acid.   b. Estimation of pathology   15   Section B (Open ended: Any 3 experiments are to be conducted - May be selected from the list or the teacher can add related experiments)   1. Dichrometry   2. Iodometry & Iodimetry   3. Complexometry	Ш	ANA		9
normality and molarity   12   Theory of acid-base titrations, permanganometric and dichrometric titrations, iodometry and complexometric titrations. Theory of acid-base indicator – redox indicators   13   Principles of colorimetry – estimation of biomolecules – glucose and chlorophyll.   14   Radioactive decay series, Radioactive equilibrium, Average life, Half-life. Detection of radio activity-Geiger Muller Counter, Wilson cloud chamber. Units of radioactivity – Curie and Rutherford, Units of radiations.   15   Nuclear Chemistry – stability of nucleus, n/p ratio.   3   Artificial transmutation and radioactivity, mass defect, binding energy.   16   Applications of radio activity- in medicine and agriculture.   3   Biological effects of radiation, pathological and genetic damage.   30    18   Section A: Volumetric Analysis (5   Experiments (double titration) from Section A are compulsory)   1. Preparation of standard solutions.   2. Neutralization Titrations   a. Strong acid – Strong base   b. Strong acid – Strong base   b. Strong acid – Strong base   c. Weak acid – Strong base   c. Weak acid – Strong base   c. Weak acid – Strong base   c. Strong titrations   e. Estimation of Pc2+/FeSO4.7H2O/Mohr's salt.   19   Section B (Open ended: Any 3 experiments are to be conducted - May be selected from the list or the teacher can add related experiments)   1. Dichrometry   2. Iodometry & Iodimetry   3. Complexometry   4. Complexometry   4. Complexometry   4. Complexometry   4. C				
iodometry and complexometric titrations. Theory of acid-base indicator — redox indicators  13 Principles of colorimetry — estimation of biomolecules ~ glucose and chlorophyll.  14 Radioactive decay series, Radioactive equilibrium, Average life, Half-life. Detection of radio activity-Geiger Muller Counter, Wilson cloud chamber. Units of radioactivity - Curie and Rutherford, Units of radiations.  15 Nuclear Chemistry - stability of nucleus, n/p ratio. Artificial transmutation and radioactivity, mass defect, binding energy.  16 Applications of radio activity- in medicine and agriculture. Biological effects of radiation, pathological and genetic damage.  V VOLUMETRIC ANALYSIS  30  18 Section A: Volumetric Analysis (5 Experiments (double titration) from Section A are compulsory)  1. Preparation of standard solutions. 2. Neutralization Titrations a. Strong acid — Strong base b. Strong acid — Weak base c. Weak acid — Strong base 3. Redox Titrations - Permanganometry a. Estimation of oxalic acid. b. Estimation of Fe <sup>2+/</sup> FeSO <sub>4</sub> .7H <sub>2</sub> O/Mohr's salt.  19 Section B (Open ended: Any 3 experiments are to be conducted - May be selected from the list or the teacher can add related experiments)  1. Dichrometry 2. Iodometry & Iodimetry 3. Complexometry				
Theory of acid-base indicator – redox indicators   13   Principles of colorimetry – estimation of biomolecules – glucose and chlorophyll.   2   RADIOACTIVITY AND NUCLEAR CHEMISTRY   9   14   Radioactive decay series, Radioactive equilibrium, Average life, Half-life. Detection of radio activity-Geiger Muller Counter, Wilson cloud chamber. Units of radioactivity – Curie and Rutherford, Units of radiations.   3   Artificial transmutation and radioactivity, mass defect, binding energy.   16   Applications of radio activity- in medicine and agriculture.   3   Biological effects of radiation, pathological and genetic damage.   30   VOLUMETRIC ANALYSIS   30   18   Section A: Volumetric Analysis (5 Experiments (double titration) from Section A are compulsory)   1. Preparation of standard solutions.   2. Neutralization Titrations   a. Strong acid – Strong base   b. Strong acid – Strong base   b. Strong acid – Strong base   c. Weak acid – Strong base   3. Redox Titrations - Permanganometry   a. Estimation of Pc2**/FeSO4.7H2O/Mohr's salt.   19   Section B (Open ended: Any 3 experiments are to be conducted - May be selected from the list or the teacher can add related experiments)   1. Dichrometry   2. Iodometry & Iodimetry   3. Complexometry   3. Complexom		12	Theory of acid-base titrations, permanganometric and dichrometric titrations,	3
13   Principles of colorimetry – estimation of biomolecules - glucose and chlorophyll.   3				
Chlorophyll.   IV   RADIOACTIVITY AND NUCLEAR CHEMISTRY   14   Radioactive decay series, Radioactive equilibrium, Average life, Half-life.   3   Detection of radio activity-Geiger Muller Counter, Wilson cloud chamber.   Units of radioactivity - Curie and Rutherford, Units of radiations.   15   Nuclear Chemistry - stability of nucleus, n/p ratio.   3   Artificial transmutation and radioactivity, mass defect, binding energy.   16   Applications of radio activity- in medicine and agriculture.   3   Biological effects of radiation, pathological and genetic damage.   30				
IV RADIOACTIVITY AND NUCLEAR CHEMISTRY  14 Radioactive decay series, Radioactive equilibrium, Average life, Half-life. Detection of radio activity-Geiger Muller Counter, Wilson cloud chamber. Units of radioactivity - Curie and Rutherford, Units of radiations.  15 Nuclear Chemistry - stability of nucleus, n/p ratio. Artificial transmutation and radioactivity, mass defect, binding energy.  16 Applications of radio activity- in medicine and agriculture. Biological effects of radiation, pathological and genetic damage.  V VOLUMETRIC ANALYSIS  18 Section A: Volumetric Analysis (5 Experiments (double titration) from Section A are compulsory)  1. Preparation of standard solutions. 2. Neutralization Titrations a. Strong acid – Strong base b. Strong acid – Weak base c. Weak acid – Strong base 3. Redox Titrations - Permanganometry a. Estimation of oxalic acid. b. Estimation of Fe <sup>2+/</sup> FeSO <sub>4</sub> .7H <sub>2</sub> O/Mohr's salt.  19 Section B (Open ended: Any 3 experiments are to be conducted - May be selected from the list or the teacher can add related experiments) 1. Dichrometry 2. Iodometry & Iodimetry 3. Complexometry		13		3
14 Radioactive decay series, Radioactive equilibrium, Average life, Half-life.  Detection of radio activity-Geiger Muller Counter, Wilson cloud chamber. Units of radioactivity - Curie and Rutherford, Units of radiations.  15 Nuclear Chemistry - stability of nucleus, n/p ratio.  Artificial transmutation and radioactivity, mass defect, binding energy.  16 Applications of radio activity- in medicine and agriculture.  Biological effects of radiation, pathological and genetic damage.  V VOLUMETRIC ANALYSIS  18 Section A: Volumetric Analysis (5 Experiments (double titration) from Section A are compulsory)  1. Preparation of standard solutions. 2. Neutralization Titrations a. Strong acid – Strong base b. Strong acid – Weak base c. Weak acid – Strong base 3. Redox Titrations - Permanganometry a. Estimation of oxalic acid. b. Estimation of Fe <sup>2+/</sup> FeSO <sub>4</sub> .7H <sub>2</sub> O/Mohr's salt.  19 Section B (Open ended: Any 3 experiments are to be conducted - May be selected from the list or the teacher can add related experiments) 1. Dichrometry 2. Iodometry & Iodimetry 3. Complexometry	TX 7	DAD		0
Detection of radio activity-Geiger Muller Counter, Wilson cloud chamber. Units of radioactivity - Curie and Rutherford, Units of radiations.  15 Nuclear Chemistry - stability of nucleus, n/p ratio. Artificial transmutation and radioactivity, mass defect, binding energy.  16 Applications of radio activity- in medicine and agriculture. Biological effects of radiation, pathological and genetic damage.  V VOLUMETRIC ANALYSIS  18 Section A: Volumetric Analysis (5 Experiments (double titration) from Section A are compulsory)  1. Preparation of standard solutions. 2. Neutralization Titrations a. Strong acid – Strong base b. Strong acid – Weak base c. Weak acid – Strong base 3. Redox Titrations - Permanganometry a. Estimation of oxalic acid. b. Estimation of oxalic acid. b. Estimation of Fe <sup>2+/</sup> FeSO4.7H <sub>2</sub> O/Mohr's salt.  19 Section B (Open ended: Any 3 experiments are to be conducted - May be selected from the list or the teacher can add related experiments)  1. Dichrometry 2. Iodometry & Iodimetry 3. Complexometry	IV			
Units of radioactivity - Curie and Rutherford, Units of radiations.  15 Nuclear Chemistry - stability of nucleus, n/p ratio. Artificial transmutation and radioactivity, mass defect, binding energy.  16 Applications of radio activity- in medicine and agriculture. Biological effects of radiation, pathological and genetic damage.  V VOLUMETRIC ANALYSIS  18 Section A: Volumetric Analysis (5 Experiments (double titration) from Section A are compulsory)  1.
